

How Can We Help

We offer the following services to help you set up affordable, effective training solutions

- **We Provide Information**

We will provide you with all the information you need to set up training that's just right for your company. We have a range of National Certificates, Limited Credit Programmes, apprenticeships and training pathways that are available to meet your needs. There are also lots of delivery options; such as distance learning, on-job learning, courses and customised programmes. Ask us about funding too, you may be able to get financial support.

- **We Source & Co-ordinate**

Sourcing suitable providers can be a lengthy process. Let us assist by sourcing, arranging and coordinating with training providers and assessors to ensure you access the best and most cost effective options.

- **We Customise Training**

Every company is unique. We're here to listen to your specific needs and help find a solution that's right for you. Let us help design training that meets your specific business needs.

- **We Support and Monitor**

Once underway we provide ongoing support by visiting and monitoring your training on a quarterly basis. This includes mentoring and supporting trainees and apprentices and ensuring training providers are effective in their delivery.

- **We Promote Your Industry**

A sustainable workforce is critical for a successful future. We promote our industry sectors to prospective employees and school leavers by networking with schools, government agencies and industry groups. Tell us what needs are emerging, and we'll ensure they are catered for in our qualifications.
